

Ryan Stopczynski

Tampa, FL 33626 | (248) 568-8076 | rmstopczynski@gmail.com | [LinkedIn](#) | [GitHub](#)

Education:

University of South Florida, Tampa, FL

Master of Science, Artificial Intelligence and Business Analytics (GPA 3.94/4.0)

May 2026

University of South Florida, Tampa, FL

Bachelor of Science, Business Analytics and Information Systems (GPA: 4.0/4.0)

May 2024

Technical Skills:

Programming: Python, R, SQL, C#, JavaScript, HTML, CSS

Data Science & ML: Pandas, NumPy, Scikit-learn, TensorFlow, NLP

ML Algorithms: Logistic Regression, Decision Trees, Random Forest, SVM, KNN, Naïve Bayes, Neural Networks

Data Governance & Cataloging: Informatica IDMC, CLAIRE AI, Metadata Management, Data Quality Analysis, Data Cataloging

Data Visualization: Tableau, Power BI, Matplotlib, Interactive Dashboards

Databases: SQL Server, PostgreSQL, Oracle, SAP HANA

Cloud & Integration: Microsoft Azure, AWS, REST APIs, API Orchestration

Enterprise Architecture: LeanIX, SAP Redwood Scheduler

Frameworks: ASP.NET Core MVC, Entity Framework Core, RESTful APIs

Tools: Git, Visual Studio, Jupyter Notebook, Google Colab, RStudio, Spyder, Kiro, MS Excel (Advanced Analytics)

Certifications: [USF Muma Citizen Data Science](#), [Data Analysis for Sustainability](#)

Relevant Experience:

Data Governance Business Systems Analyst Intern, Jabil, St. Petersburg, FL

May 2026 – Present

- Served as Informatica champion on a cross-functional team building an in-house AI chatbot; integrated Informatica IDMC via REST API through a proof-of-concept, enabling natural language querying of governed metadata assets with full orchestration and pagination logic.
- Designed and implemented API-based data flows connecting Informatica's metadata catalog to the chatbot backend, supporting governed data discovery across the enterprise.
- Evaluated AI-enabled data governance capabilities including Informatica CLAIRE AI across metadata enrichment, metadata classification, and data quality analysis use cases; documented findings and delivered a knowledge-sharing presentation to the Data Governance Enablement team.
- Supported integration of LeanIX enterprise architecture tool with Informatica IDMC, coordinating with cross-functional leads to establish sandbox connectivity and producing documentation outlining configuration steps and settings.
- Researched Informatica's unstructured data capabilities including metadata extraction and classification; ingested metadata for an unstructured catalog source in the sandbox environment and defined recommendations for unstructured data management.
- Designed an API-based integration between Informatica and SAP Redwood Scheduler to automate management of SAP HANA-ingested assets, reducing manual overhead for data governance and operations teams.

Graduate Teaching Assistant, University of South Florida, Tampa, FL

August 2024 – May 2025

- Provided instructional support for undergraduate students through in-person and remote office hours.
- Graded projects and provided constructive feedback to enhance student learning.
- Coordinated with graduate TAs to support scheduling and workload planning for a 400+ student course.

Project Experience:

U.S. Nuclear Outage Tracking Web Application

- Developed and deployed a full-stack ASP.NET Core MVC app with C# and Azure to track U.S. nuclear outages using real-time data from a RESTful EIA API.
- Implemented CRUD operations and interactive visualizations (jQuery, Razor, Bootstrap) to display outage trends by facility and generator.

Fake News Detection Using Machine Learning

- Built a Python-based classification tool to detect fake news using NLTK and Scikit-learn for preprocessing (TF-IDF, tokenization) and model evaluation.
- Tested SVM, Logistic Regression, and Naïve Bayes algorithms, with SVM achieving the highest accuracy; designed for use in journalism and social media moderation.

Healthcare Data Warehouse

- Designed and implemented a healthcare data warehouse in Oracle SQL Developer using OLAP/OLTP schemas, ERDs, and a Julian date dimension to support longitudinal analysis.
- Transformed Mockaroo-generated patient data and built dashboards to analyze billing, procedures, and revenue trends for improved hospital decision-making.
