EDUCATION

University of South Florida

Master of Science in Artificial Intelligence and Business Analytics

Tampa, FL

Aug. 2024 – May 2026

University of South Florida

Bachelor of Science in Business Analytics and Information Systems

Tampa, FL

Aug. 2020 – May 2024

EXPERIENCE

Data Governance Engineer Intern

Jabil

May 2026 – Present

St. Petersburg, FL

- Built and containerized a Python integration service connecting SAP LeanIX and Informatica IDMC through REST APIs, automating metadata enrichment, URL mapping, relationship generation, sandbox validation, and enterprise data-flow checks.
- Developed API integrations between Informatica's metadata catalog and an internal AI chatbot, implementing REST authentication, pagination, and orchestration while supporting validation of Apache Airflow workflows enabling natural-language metadata search.
- Evaluated ingestion of unstructured enterprise data from Amazon S3 into Informatica IDMC, testing metadata extraction capabilities and providing recommendations for enterprise-scale governance of unstructured assets.
- Evaluated AI-driven metadata classification and data quality capabilities using Informatica CLAIRE AI, benchmarking automated enrichment against processes and presenting findings to influence tooling decisions.
- Collaborated with Enterprise Architecture and Data Lake teams to streamline metadata governance workflows, documenting implementation standards and presenting recommendations that reduced catalog management effort.

Graduate Teaching Assistant

University of South Florida

Aug. 2024 – May 2025

Tampa, FL

- Supported 800+ undergraduate students across two semesters in Business and Economic Statistics through in-person and remote office hours, clarifying core statistical concepts (hypothesis testing, regression, probability distributions) and Excel-based analysis techniques.
- Graded statistical projects and assignments, providing detailed feedback on methodology and interpretation to strengthen students' analytical reasoning.

PROJECTS

Healthcare Data Engineering Pipeline | *Python, Databricks, Delta Lake, dbt, Airflow, Kafka, Docker*

- Migrated a normalized healthcare OLTP schema into a Databricks lakehouse using Bronze/Silver/Gold architecture, dimensional modeling, and a 5-task Airflow pipeline with automated orchestration and monitoring
- Built dbt transformation workflows with 19 models and 60 data-quality tests on Delta Lake, alongside Kafka-based ADT event streaming using Databricks Auto Loader with schema evolution handling.

Nuclear Outage Tracking Application | *C#, ASP.NET Core, PostgreSQL, REST APIs, LLM APIs, MCP*

- Developed a full-stack ASP.NET Core/PostgreSQL application tracking U.S. nuclear outages through scheduled EIA API ingestion, replacing in-memory storage with persistent, authenticated user data and watchlists.
- Built REST APIs, an MCP server enabling AI tool access to outage data, and an LLM-powered summarization feature using Groq with fallback handling for reliable responses.

Manufacturing AI Intelligence Platform | *Python, XGBoost, LangChain, ChromaDB, Fast API, Streamlit*

- Built a predictive maintenance pipeline using sensor time-series data, engineering rolling statistical features and training XGBoost and Logistic Regression models with time-based validation for failure prediction.
- Designed a RAG-based AI assistant combining ML predictions with retrieved maintenance documentation using LangChain and ChromaDB, deployed through FastAPI/Streamlit with Docker and evaluation testing.

TECHNICAL SKILLS

Languages: Python, SQL, C#, R, JavaScript, HTML, CSS

Data Engineering: Spark, Databricks, Delta Lake, dbt, Airflow, Kafka, Docker, ETL/ELT, Data Modeling

AI & ML: Scikit-learn, XGBoost, LangChain, RAG, ChromaDB, LLM APIs

Data Platforms: PostgreSQL, SQL Server, Snowflake, AWS S3, Informatica IDMC, REST APIs

Analytics & Tools: Pandas, NumPy, Git, GitHub, Postman, Power BI, Tableau, Excel
